Merlinus Redivivus:

Being an

ALMANACK

for the Year of our Redemption, 1686.

and from the Creation of the World, according to the best of History, 5635.

being the second after *Bissextile*, or Leap-year.

Which is contained matter and things suitable for such a Work: As Eclipses, Remarkable Conjunctions, Meteorological, and Astrological Observations, Lunations, and other Configurations of the Erratick Stars; together with the Diurnal motion of the Planets, and a Table of Houses more Correct and Demonstrable, than those used by our Modern Astrologers; formed according to the Intent and true Principles

Of the Great *Ptolomy*.

Calculated for the Meridian of *London*.

Those { Latitude / Longitude } is { 51 / 24 } deg. { 32 / 20 } Minutes

By *JOHN PARTRIDGE*

Student in Physick and Astrology.

Diversos diversa Juvant, non omnia Cunctos.

LONDON Printed by *R. R.* for the Company of STATIONERS.

To his Honoured Father

JOHN PARTRIDGE

Of *Putney* in the County of *Surrey*.

THE

AUTHOR

Hereof

HUMBLY DEDICATES

THIS

ANNUAL TREATISE,

AS A

Thankful Acknowledgment

For all his former

PATERNAL FAVOURS.

And in all Duty and Obedience desires ever to Approve himself, his Dutiful Son, while he is

JOHN PARTRIDGE.

To the Curteous Reader.

Reader,

HEre preſent thee with one years over-ſight more, and intreat thee to correct what Errors thou findeſt therein, becauſe I could not attend the Preſs, as I uſually did.

The Table of Houſes are the ſame that were in my laſt years Almanack without Alteration, and the Planets places are taken from our *Engliſh* Ephemerides for the time being; indeed, I did intend to Calculate the motions for the whole Year, from Mr. *Streets* Tables, but my other occations prevented me, and therefore I will reſerve that work for another Year, when I ſhall be more at leaſure.

And here alſo, Let me give notice to all my Friends, and Foes likewiſe, that I have been abuſed yearly, three or four times, by ſome Raſcally Fellow or other, who hath impudently presumed, and pretended to Print *Partridge his Prophecy*, by which I am Abuſed, and the People Cheated; I do therefore here declare, That as I never did write any ſuch thing as Prophecy, or Predictions, beſides my Almanack, ſo I never will; and therefore, when ever you hear any ſuch thing publiſhed, be ſure I know nothing of it, and it is nothing elſe but an Abuſe on you, and

Your Friend,

JOHN PARTRIDGE.

A short Chronological Table of the most remarkable Accidents from the beginning of the World to this present Year, 1686.

Since the Creation of the World.

A Table of the Moons Latitude, to every ſecond degree.

☊ ☋	G.	M.	G.	M	G.	M	☊ ☋
0	0	0	2	30	4	20	30
2	0	15	2	39	4	25	28
4	0	21	2	48	4	30	26
6	0	31	2	56	4	34	24
8	0	42	3	5	4	38	22
10	0	52	3	13	4	42	20
12	1	2	3	21	4	45	18
14	1	13	3	28	4	48	16
16	1	23	3	36	4	51	14
18	1	33	3	43	4	53	12
20	1	43	3	50	4	55	10
22	1	52	3	56	4	57	8
24	2	2	4	3	4	59	6
26	2	12	4	9	4	59	4
28	2	21	4	14	5	0	2
30	2	30	4	20	5	0	0

Enter this Table with the Moons diſtance from either of her Nodes, and if her diſtance is leſs then three Signs, enter the outmoſt left hand Colume deſcending; but if her diſtance exceeds three Signs, enter the outmoſt right hand Colume Aſcending, and in ſome of the other Columes, you have your deſire,

Example.

If her diſtance is two Signs, ten Degrees from the ☊, her Latitude is 3 Deg. 13 Min. *North*; and ſo it is, when ſhe is diſtant 4 Signs, 20 Degrees; but when ſhe ſeparates from the ☋ her Latitude, is *South*.

Of the four Quarters of the Year.

And first of *Winter.*

WHen the gross porous Earth by Natures Skill
And humane Labour, gave proud Man his fill:
Like rowling Waves, forc't by a Hand Divine,
Throws him her Blessings, plenty 'f Bread and Wine,
And all things else, as store for Winters Rest,
All he could wish, either for Man or Beast:
She having thus expended one Years store,
Lies as one tired, to recruit for more;
Stript of her Glory, robb'd of all her Pride,
And she that gave, now wants to be supplí'd:
She wants the Solar Heat, the dewy Rain,
True Fermentation to bring forth again.
She wants a Motion, her Supplies fall short,
And wanting these, she's but a Caput mort.
She's now incas'd, expos'd and barren too,
While Captain Winter marches through and through;
Lays his Commands on all, all must obey,
None scapes his gripes, no not the raging Sea.
Locks up the Earth, and sets his Seal thereon,
And paves our Rivers with a kind of Stone:
He sweeps the Fields, and, by a Hand unseen,
He cloaths them too, with white instead of green.
Tall Trees and Shrubs obediently submit,
To what this mighty Captain shall think fit,

Whether

Whether to shake when blustering Storms oppose,
Or calmly wear his frozen snowy Cloaths.
The harmless Birds mourn for this frigid Fate,
And quite forget their rural Mirth of late.
With cold short days Sol's to the Tropick gone,
And Summer-Glories now are quite forgot.

The Winter Quarter begins when the *Sun* enters the first scruple of *Capricorn*, and that was *December* the 10*th*, at 14 hours 25 minutes after Noon, 1686; at which time four degres of the Regal Sign *Leo* doth culminate on the Mid-heaven, and 25 degrees of the Celestial Ballance riseth in the East. *Saturn* is then 30 degrees in *Virgo*, *Mars* is 5 in *Pisces*, *Jupiter* is 15 in *Scorpio*, *Mercury* is in 6 of *Capricorn*, *Venus* is in 12 of *Aquary*, and the *Sun* in the beginning of *Capricorn*. Under this Position of the Heavens doth the *Sun* make that brumal Ingress, and from the Configurations therein will the Affairs of *Europe* be influenced and governed the three ensuing Months, *December*, *January*, and *February*. In this Figure we find five of the seven Planets under the Earth, and the *Moon* just rising in the 27*th* degree of *Libra*, *Saturn* in the 11*th* elevated above all the rest, in a Mundane Square of the *Sun*, and applying to a Mundane Parallel also; which are indeed the two most principal Configurations in the whole Figure.

The Winter is nothing else but the departure of the *Sun* from these Northren Parts, by which means the Earth and its Inhabitants are deprived of the Heat thereof; and Cold, the great Enemy of Nature, then prevails: for the Diurnal Ark of the *Sun* [illegible]

being small, and the Nocturnal Ark of the Northern Stars large, they have the more power to instil their Influence on the Earth and Mankind. But besides, it is necessary that the Earth should be compressed with Cold once in a Year; for by that means its intrinsick Heat is actuated, and made more fit for a ready Production, when the Rays of the *Sun* shall open its external Pores, and so animate the nurse or nursery of Nature, as *Sendinogius* hath well observed *in tractatu de Sulphure*, pag. 13. and *Zetzner in Theat. Chimi, Vol.* 1. *pag.* 391. with *Nollius*, and others, &c.

Of the Spring Quarter.

Reviv'd with vigorous heat made warm, and bold,
We now forget the gripes of Winter's Cold:
Natures successive Laws take place; the Spring
Appears, and with it every pleasant thing.
Each Fertile Month affords some new delight,
And every hour courts the ranging sight
With some new Object that is fresh and gay,
To entertain and spend th'ensuing Day.
Nay, Nights themselves do now refresh us more,
Than short cold Days of Winter did before.
The rising Sun darts on the murmuring Streams,
And seems to gild 'em with his golden Beams,
While they steal by in Crouds, and as they go,
The rising Banks, they lend their Ecco too.
The Woods now cloath'd, their Choristers sing loud,
Now they retire from the tumultuous Croud.
The Hil's far off appear both fresh and gay,
On which young careless Lambs do feed and play,

While

While their grave careful Dams stand *by and see*
Their wanton Issues native Luxurie.
And down below full thick the Meadows stand,
Loading themselves fit for the Mower's hand.
Then turn about, and yonder on the Plain,
Behold the budding Corn, all sorts of Grain;
There's Peas, and Beans, and Wheat, and Rye, and Barley,
And Oates too will be, tho 'tis yet too early.
Then see the Trees, all cloath'd with bloomy White,
Promising Fruit, pleasant to taste and sight.
Thus Nature, plenty to each Creature yields,
And Pleasure fills each Corner of the Fields.
Let don't mistake, Nature attends its Lord,
'Tis God I mean when I express that word.
Blest be our God, 'tis he that gives us all,
The Summer, *and the* Winter, Spring *and* Fall.

The Spring Quarter begins when the *Sun* enters the first scruple of *Aries*, and that is *March* the ninth, 16 hours 25 min. P. M. 1686. at which time 8 deg. of *Sagittary*, culminates on the Mid-heaven, and 10 deg. of *Aquary* ascends in the East; *Saturn* is 26 deg. in *Virgo* Retrograde; *Jupiter* is 23 deg. in *Scorpio* Retrograde: *Mars* is in 9 deg. of *Taurus*; the *Sun* in the beginning of *Aries*; *Venus* in 3 deg. of *Taurus*; *Mercury* in 9 of *Taurus*, and the *Moon* in 8 deg. of *Aquary*: and the *Moon* separates from the square of *Venus* and applies to the square of *Mars* in the Ecliptick, and the *part of Fortune* is near 10 deg. in *Capricorn* on the Cusp of the 12*th* House. Who so pleaseth may set the Figure.

The

The Spring is so called from the budding and growing of all kinds of Vegetables, and this is caused by the Fermentation in the Earth, agitated and actuated by the Heat and Rays of the *Sun:* for from these Principles proceed all things; and all own, that Heat and Motion is the cause of all Procreation; and then it follows, that where there is Heat, there must be Motion, for it is Cold alone that hinders it; and therefore under the Equinox the Inhabitants have two Springs and Summers yearly caus'd only by the *Sun*'s passage to and fro.

Of the Summer Quarter.

NOW Sol's in's glory, and the Days are long,
And Heat alone commands the lazy Throng;
But the industrious Hand improves his Time,
And to provide for Winter's his design:
For now the Fields stand thick with crouding Ears,
The good Effect of the true Laboures Cares:
All things speak plenty to the very Eye;
The swelling Lands *express their Load thereby:*
The parching Heat by the Sun's *Rays is driven*
To ripen what the bounteous Earth hath given:
And various Colours in those Cunduits pass,
It makes some white, some red, some green like Grass.

The Summer Quarter begins when the *Sun* toucheth the first scruple of *Cancer*, and that is *June* the 11*th*, at 7 of the Clock in the Morning, 1686. At that time we find 16 deg. of *Aries* on the Mid-heaven, and 7 deg. of *Leo* ascending.

The

Summer, *quasi summa-ver*, is that time of the Year all Vegetables arrive to their greatest degree of Perfection, and Beauty; and this is the effect of the fermented Juices the Earth, and in the Roots, Bodies and Brances of all Trees, and Herbs, which are brought to their Perfection by the of the *Sun*, and by the same *Sun* burnt and destroyed also taken in their season: *Cuique sua & Tempestas.*

Of the Autumnal Quarter, called the Fall.

OW the dull Nights devour up our Day;
The Sun declines, and so he sneaks away,
If he were asham'd of what he'd done;
I'm sure that Posture don't become the Sun.
e Earth grows faint, and thinks she'th paid her due,
And all her Growth begins to languish too.
ch verdant Plant, like stooping Age, it dies,
And to'th approaching old's a Sacrifice.
e towring Woods lay down their Summers Green,
And two Month hence no tracks of Summer's seen.
ld morns and hoary Frosts enchant the Trees,
And blustering Storms that fret the foaming Seas;
ese command in chief, the rest obey,
Tis Power only that prescribes the way.
us Nature plays her part, now here, now there;
In her Extreams poor Mortals Beings are.
t's stop and wonder here! at that great Hand,
That thus did form the World by his Command;
hat spoke it into Order, Form and Growth;
From nothing, *and from* no where *call'd it forth.*
Blest be his Name.

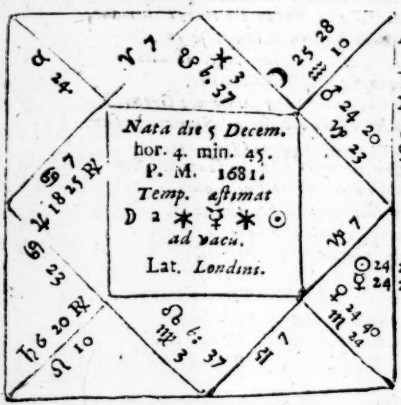
The Autumnal Quarter begins when the *Sun* enters ♎, and at is this year 1686, *Septemb.* 12, at 7 hours P.M. at which time deg. of ♈ is on the Mid-heaven, and 2 deg. of ♉ ascends in e East, the ☉ is in ☌ with ♄, and the ☽ in a mundane Parallel th ☌; so that 'tis to be feared there will be some untoward Di-emper attend Mankind at the approach of *Winter*, either quartan gues, or an unhappy Fever, afflicting Head, Bowels and Reins.

There

THere will be two Eclipses this Year, and both of the Moon. The first of them is on *May* the 27th, about a quar before 11 in the Morning, but invisible in our Meridian, and t Eclipse is not so much as mentioned by *Argol*.

The second is on the 19th of *November* about 11 of the Cl at Night, and may be seen at *London* if the Air be clear: thi a great Eclipse, and indeed they are both of them remarkable, falling in active parts of the Heavens among Martial fixed Star and in this last *Jupiter* is with the *Sun*, and *Mars* with the Vi gins Spike.

And so I come to present you with two Nativities carefu observed, of which the common Astrology can give no accou of their deaths, and yet they are dead.



This Nativity was carefully taken by an ingenious Man, and there is, nor can be but small difference between the estimate and true time. The Child was lusty and healthy till it fell into the Distemper that kill'd it, which was a little before it was two years of Age; and I think there is no reason can be given for its death in the common Astrology; for here is *Jupiter* in the Ascendent in his Exaltation; the *Sun* and *Mercury* in Sextile to the Moon *Ven*

in *Trine* to *Jupiter*, in the Ascendent, and neither *Sun* Moon, nor *Ascendent* afflicted by either of the Malevolents, yet this Child is dead, and its Distemper was an Hectick Fe- which consumed and wasted it away to nothing almost—. ce I shall propound three Queries, and refer them to the sideration of the ingenious Artists.

first; What Direction, or other natural Cause, gave the Child that Disease that proved mortal?

Secondly; Why it should be a Hectick and Consumption?

Thirdly; Why it should die so young, seing *Jupiter* is so strong in the Horoscope in *Trine* to *Venus*?

This

This Girl was poiſoned by a Mountebank in *July*, 1683, being then five Years and four Months old: he gave her a paper of Powder for the VVorms, which ſhe took in the Morning, and as ſoon as ſhe had taken it, ſhe began to vomit, her Tongue and Belly ſwelled, her Teeth were looſe, and in ten or twelve hours ſhe died.

This is a remarkable Nativity both for Poſitious and Accidents, and in the common Aſtrology there is no reaſon to be given for its Death, unleſs they alter the time, and make it an hour and a quarter ſooner, and then they will pretend to direct the Accident to the *Square* of the *Sun in Zodiaco*, which indeed is no Aſpect, for at that time there will be 25 deg. of ♎ on the tenth and 0 deg. of *Cancer* aſcending; now the diſtance from the tenth to the Aſcendent is the fourth part of the Circle, and this is a *Square*, and therefore how the *Sun* can caſt his *ſquare* to the Aſcendent from the Cuſp of the eleventh I know not. But beſides, there cannot be a quarter of an hour allowed between the eſtimate and true time, neither can the *Sun* there give Death by Poiſon, nor is the Aſcendent giver of Life. Hence there likewiſe three Queries ariſeth.

1. What was the true philoſophical Cauſe of its Death, and by what Direction?
2. Why it ſhould die by Poiſon, ſeeing *Jupiter* is on the Cuſp of the tenth, the Houſe of Medicines?
3. Why it ſhould live five Years and no more?

The Authors Farewel to his Book.

LEt's fairly part my Book, time calls away;
And when time calls, there's no excuſe to ſtay.
'Tis not thy fate alone, you know 'tis true,
For when time calls, great Volumes they go too:
Beſides, thou ought to go, thou can't do leſs,
'Tis motion that compleats the Univerſe:
Therefore be gone; walk with a cautious Eye;
And if thou meet's Affronts, go, paſs them by.

The Author's farewel to his Book.

And words ne're black the Skin, take all that's said;
The Year being done, thou and thy Crimes are dead.
If sure keep a good Tongue, good words are free,
And give good Language t'whom so'ere it be;
That thou keep'st thy Friends; and shun all strife,
That way alone leades to a quiet Life.
To get thee hence; let thy Obedience show,
Thou staid'st for order, and didst wait to go.
